Implementation of a
web-plugin for vision
disabled people

The problem

- Internet has shifted more towards visual implementation and information
- However not everyone can benefit from the modern customs
- Some are actually put into more of a disadvantage

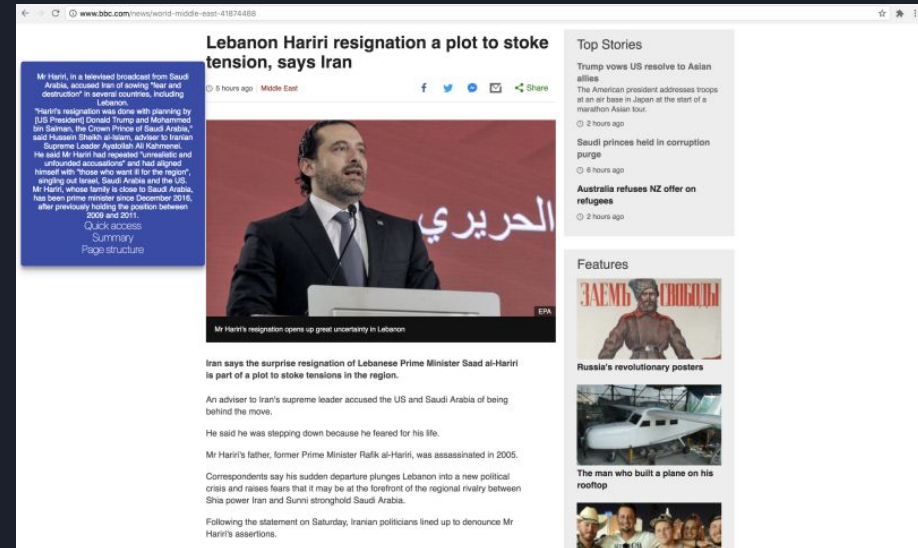

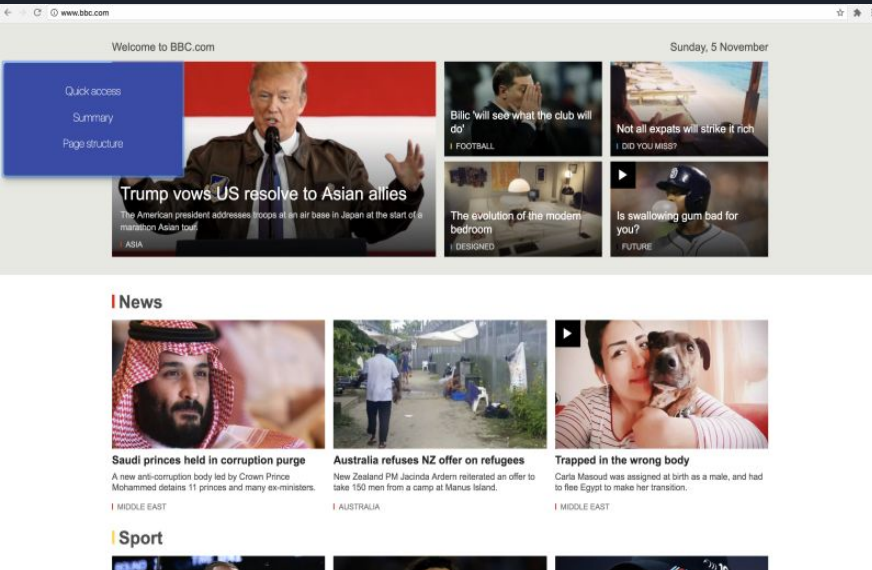

The solution

- Plugin for Chrome
- Web pages easier to navigate for the visually impaired.
- Making the live chat accessible

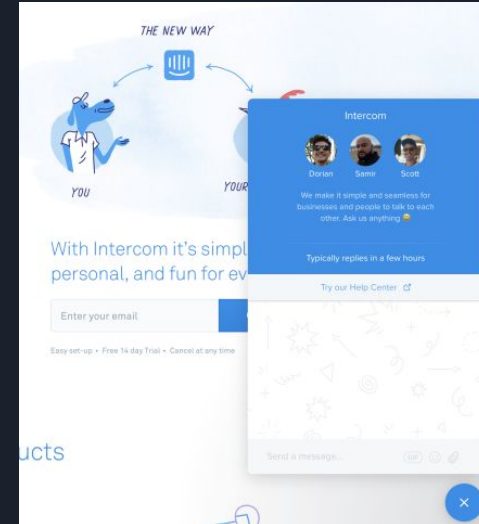

Easier web page navigation

- Parsing the content of the web page and then through an API returns a summarized version
- Describes an image on the page to the user

If you can't see that doesn't mean you can't live chat

- Intercom.com now available for our visually impaired friends
- Reads the incoming messages to the user.

Time for a little demo of this bright creation

What lies ahead

- Expanding to other browsers
- Making a consistent solution across all live chats
- A client based solution that is swift and make end user convenient

Thank you
